

KEERTHI KORRAPATI

DevOps Engineer

korrapatikeerthi24@gmail.com | +91-6301000051 | www.linkedin.com/in/korrapati-keerthi

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 4 years of experience architecting and automating CI/CD pipelines, cloud infrastructure, and container orchestration on AWS. Skilled in Terraform IaC, Kubernetes (EKS), Docker, Jenkins, and Argo CD GitOps delivery. Proven track record of 99.9% deployment success rates, 40% faster infrastructure provisioning, 30% reduction in deployment time, and 20% cloud cost savings. Passionate about building robust, scalable, and secure delivery pipelines that accelerate software release velocity.

TECHNICAL SKILLS

CI/CD&Automation	Jenkins, Argo CD (GitOps)
Cloud – AWS	EC2, EKS, VPC, IAM, S3, RDS, ALB, ELB, Auto Scaling, Route 53, CloudWatch, ECR, EBS, EFS
Infrastructure as Code	Terraform (AWS provisioning, modules, state mgmt)
Containers&Orchestration	Docker (multistage builds, image optimization), Kubernetes (Deployments, Services, Ingress, PV/PVC, Namespaces), Helm
Monitoring&Logging	Prometheus, Grafana, AWS CloudWatch, Alerting, Dashboards
Scripting	Shell Scripting
Version Control	Git, GitHub, Branching Strategy
Operating Systems	Linux (Ubuntu/RHEL), Windows Server
Security &Networking	VPC , VPN, Security Groups, IAM, MFA, SSL, LDAP, RBAC

PROFESSIONAL EXPERIENCE

Cloud - DevOps Engineer | Capgemini – Bangalore | Project - Enterprise Developer Portal - DevOps Implementation
June 2025 – Present

- Designed and implemented enterprise-scale Internal Developer Platform (IDP) using Backstage on AWS EKS, orchestrating multi-cloud CI/CD pipelines and infrastructure automation for 100+ microservices.
- Infrastructure Deployment: Deployed and configured Backstage platform on AWS EKS with Kubernetes orchestration, including StatefulSets, persistent storage (PostgreSQL), ingress controllers, and RBAC security policies
- Container&Registry Management: Set up AWS ECR for container registry, built and maintained Docker images, implemented CI/CD pipelines for automated image builds and deployments with semantic versioning
- Multi-Cloud Integration: Integrated AWS services (EKS, ECR, S3) with Azure DevOps pipelines, configured cross-platform authentication, secrets management, and automated deployment workflows

- CI/CD Automation: Configured 10+ software templates for automated pipeline provisioning, enabling bulk deployment of 100+ applications through Azure DevOps API integration and smart filtering mechanisms
- GitOps Implementation: Integrated ArgoCD for GitOps workflows with real-time webhook automation, configured deployment manifests (services, ingress, deployments), and established automated sync monitoring
- Monitoring & Security: Set up Grafana/Prometheus monitoring, implemented Kubernetes secrets management for multi-environment credentials (AWS, Azure, GitHub, SonarQube), and configured secure OAuth/SSO authentication
- **Technologies:** AWS (EKS, ECR, S3, IAM), Kubernetes, Docker, ArgoCD, Azure DevOps, PostgreSQL, GitHub, Grafana, NGINX Ingress, YAML

DevOps Engineer | Capgemini – Bangalore | Project – GenX

June 2023 – June 2025

- Built Jenkins CI/CD pipelines for multi-environment deployments with zero manual intervention, reducing deployment effort by 30%
- Automated AWS infrastructure provisioning using Terraform (VPC, EC2, IAM, EKS, ALB, Auto Scaling), standardizing environments across dev/staging/production
- Orchestrated production EKS clusters with Ingress, HPA, and rolling updates; implemented GitOps with Argo CD maintaining 100% deployment consistency
- Containerized microservices with Docker multistage builds (30% smaller images) and managed artifacts in AWS ECR
- Deployed Prometheus/Grafana monitoring with custom dashboards, reducing MTTD by 35%
- Managed AWS platform (EC2, S3, RDS, VPC) with 99.5% uptime; achieved 20% cost reduction through optimization strategies

DevOps Intern | Capgemini – Bangalore

March 2022 – May 2022

- Built a full-stack To-Do Management System using Spring Boot (RESTful APIs) and MySQL, then containerized it with Docker and automated CI/CD with Jenkins.
- Hosted application on AWS EC2, configuring security groups and IAM roles for secure remote access and high availability.

KEY ACHIEVEMENTS

- 99.9% deployment success rate achieved through fully automated Jenkins CI/CD pipelines.
- 40% faster infrastructure provisioning by standardizing Terraform IaC modules for AWS.
- 30% reduction in Docker image sizes via multistage build optimization.
- 35% reduction in deployment troubleshooting time with Prometheus + Grafana observability.
- 20% AWS cost savings through Reserved Instances, rightsizing, and S3 lifecycle policies.
- 50% improvement in disaster recovery via S3 cross-region replication strategy.
- 100% GitOps deployment consistency across all environments using Argo CD.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science Engineering

Sri Venkateswara College of engineering, Tirupati | 2018 – 2022

CERTIFICATIONS & AWARDS

- AWS Certified Cloud Practitioner – Amazon Web Services
- Rising Star Award – Recognition by Capgemini
- Monetary Award – Recognition by Capgemini
